Marc, Norm Fear is aware of the details and has signed off already. Also, Chris Trupish was in on the original consultation to provide any flood protection feedback. I've copied them to make sure they are in the loop as we proceed. JS

HI Marc,

The Kings Park project relates to the alteration of two berms which separate the west softball diamond from the soccer field and the soccer field from the east baseball diamond. After the 1997 flood, a dike was installed on the northern boundary of the Kings Park. At the same time, the excess clay that was utilized in the flood proofing process was positioned between the three fields to provide a better viewing area for the spectators. It was a great idea but as a result of the berms being joined to the north dike, the natural flow of water during rain storms was trapped at the northeast corner of each field. This in turn made the fields unplayable for 5-7 days.

The solution to the problem is merely excavating a swale, approximately 4 feet in width, at the northern point of each berm. This excavation will not alter the dike but will allow the water to naturally drain in a northeast direction towards the river.

Should you have any questions or require additional information do not hesitate in contacting me.

Thanks.

Murray

Hi Mr. Harding,

To make the grant approval process go a little smoother, could you please provide me with some further information. Is it for the construction/alteration of a berm (s) and, if so, what is the purpose of said berm(s). Thanks,

Marc Pittet

Hi Jake,

How have you made out with the quotation for the adjustment of the burms at Kings Park?

I thought I had sent you an email with my address but, by the looks of it, someone else may have received it as I failed to insert the "d" in your address.

Talk to you soon.

Murray Harding
