Comments
Water 3. There is a myth that Manitoba can generate usable power, based on heat sources deep under the city. We have no magma resources. This cannot happen. This myth is as fake as is the 24 year-old myth that Manitoba can make so much hydrogen from our hydro power, that we can replace all the fossil fuel in Alberta. MB is not greater than AB. AB's energy is more than 10 times as much. We can use large amounts of electricity to cool homes, by pumping summer heat into the ground, but no one can use 10C soil to make 'electric power'.

Public engagement (optional)
I consent to being contacted to participate in potential public engagement related to this matter.
