6" meter	$207.60	
8" meter	$285.70	
10" meter	$363.80	

Explanation of Charges

Sewer Rate

The sewer rate is based on the amount of water you use, since most of it ends up as sewage. This money is used to collect, transport and treat sewage so that it meets environmental requirements before it is released to the Red and Assiniboine Rivers.

Water Rate

The water rate is based on the amount of water you use, as measured by the water meter. This covers the cost of bringing water from Shoal Lake to your home, including operating and maintaining the aqueduct, pumping stations, reservoirs, and distribution system.

Quarterly or Basic Charge

This charge is based on meter size and the number of days in your billing period. It covers the cost of your water meter, customer service, billing, and postage. This charge is based on a 90-day billing period. If your billing period is more or less than 90 days, your quarterly charge will vary slightly.
