Agenda – Council – April 30, 2014

Report – Standing Policy Committee on Protection and Community Services – April 14, 2014

Item No. 1 Current Enforcement Procedures – Hazardous Materials

STANDING COMMITTEE RECOMMENDATION:

On April 23, 2014, the Executive Policy Committee concurred in the recommendation of the Standing Policy Committee on Protection and Community Services and submitted the following to Council:

1. A. That a collaborative approach between Winnipeg Fire Paramedic Service and the Planning, Property and Development Department be established to provide:

    i. Identification of "at risk" hazardous occupancies or properties.
    ii. Inspection based upon occupancy and hazardous processes.
    iii. Inspection based upon Building and Fire Code compliance.
    iv. Fire operations preplanning and hazardous materials identification.

    B. That an identification and planning tool be developed to provide inspectors with specific building and occupancy criteria to be made available at point of inspection.

    C. That the following new inspection schedule for hazardous occupancies be established:

    i. High Hazard (F1) Occupancies – Annual Inspection frequency.
    ii. Medium Hazard (F2) Occupancies – Three year inspection frequency.
    iii. Low Hazard (F3) Occupancies – Five year inspection frequency.

2. That The Fire Prevention By-law No. 150/2004 be amended to include an inspection fee for High Hazard (FI) Occupancies as per attached Appendix A.

3. That an increase to the civic staff establishment of one FTE Fire Prevention Officer in the Winnipeg Fire Paramedic Services Fire Prevention Branch be authorized.

4. That the Proper Officers of the City be authorized to do all the things necessary to implement the foregoing.

Report – Standing Policy Committee on Protection and Community Services – April 14, 2014

DECISION MAKING HISTORY:

EXECUTIVE POLICY COMMITTEE RECOMMENDATION:

On April 23, 2014, the Executive Policy Committee concurred in the recommendations of the Standing Policy Committee on Protection and Community Services and submitted the matter to Council.

STANDING COMMITTEE RECOMMENDATION:

On April 14, 2014, the Standing Policy Committee on Protection and Community Services concurred in the recommendation of the Winnipeg Public Service and submitted the matter to the Executive Policy Committee and Council.

On March 10, 2014, the Standing Policy Committee on Protection and Community Services granted a further extension of time of 30 days for the Winnipeg Public Service to report back on the matter.

On February 10, 2014, the Standing Policy Committee on Protection and Community Services granted a further extension of time of 30 days for the Winnipeg Public Service to report back on the matter.

On January 13, 2013, the Standing Policy Committee on Protection and Community Services granted a further extension of time of 30 days for the Winnipeg Public Service to report on the matter.

On November 7, 2013, the Standing Policy Committee on Protection and Community Services granted an extension of time of up to 60 days for the Winnipeg Public Service to report back on the on the matter.

On October 8, 2013, the Standing Policy Committee on Property and Development requested that the Winnipeg Public Service report back on the current enforcement practices and procedures of city by-laws, provincial acts, and federal railway regulations related to hazardous materials to the November 4, 2013, meeting of the Standing Policy Committee on Protection and Community Services.

ADMINISTRATIVE REPORT

Title: Current Enforcement Practices and Procedures of City By-laws, Provincial Acts and Federal Railway Regulations Related to Hazardous Materials

Critical Path: Standing Policy Committee on Protection and Community Services - Executive Policy Committee - Council

AUTHORIZATION

Author	Department Head	CFO	CAO
Bill Clark	Bill Clark	M. Ruta	D. Joshi A/CAO

RECOMMENDATIONS

1. That Standing Policy Committee on Protection and Community Services endorse the following:
    - That a collaborative approach between WFPS and PP&D be established to provide:
        - Identification of "at risk" hazardous occupancies or properties
        - Inspection based upon occupancy and hazardous processes
        - Inspection based upon Building and Fire Code compliance
        - Fire operations preplanning and hazardous materials identification

    - That an identification and planning tool be developed to provide inspectors with specific building and occupancy criteria to be made available at point of inspection.

    - That the City establish the following new inspection schedule for hazardous occupancies:
        - High Hazard (F1) Occupancies – Annual Inspection frequency
        - Medium Hazard (F2) Occupancies – Three year inspection frequency
        - Low Hazard (F3) Occupancies – Five year inspection frequency

2. That Council authorize the implementation of an inspection fee for high hazard (F1) occupancies to be included under Schedule "A" Fee Schedule in the Fire Prevention By-law No. 150/2004. Attached as Appendix A is a draft by-law to amend Schedule "A". Attached as Appendix B is a current listing of fire inspection fees and service rates.

3. That Council authorize an increase to the civic staff establishment of one FTE Fire Prevention Officer in the WFPS Fire Prevention Branch.

4. That the proper Officers of the City be authorized to do all the things necessary to implement the foregoing.

REASON FOR THE REPORT

1. At the Standing Policy Committee (SPC) on Property and Development meeting of October 8, 2013 (Minute No. 246), the Planning, Property and Development Department report, "Mission Industrial Neighbourhood – Planning Approaches for Mitigating Conflicts Between Residential and Industrial Uses" was presented and SPC concurred in the recommendation of the Winnipeg Public Service. The SPC on Property and Development also requested that the Winnipeg Public Service report back on the current enforcement practices and procedures of city by-laws, provincial acts and federal railway regulations related to hazardous materials to the November 4, 2013 meeting of the Standing Policy Committee on Protection and Community Services.

2. Council approval is required to enact the amending by-law to amend Schedule "A" of the Fire Prevention By-law No. 150/2004.

3. Council approval is required to increase civic staff establishment.

IMPLICATIONS OF THE RECOMMENDATIONS

There will be increased inspection and enforcement activities directed at high hazard occupancies. The Province of Manitoba is considering developing a mandated inspection frequency for high hazard (F1) occupancies, however the anticipated time frame is unknown.

The current Fires Prevention and Emergency Response Act requires that the Chief of any municipality (also known as the local assistant under the Fires Prevention and Emergency Response Act) has the authority to develop an inspection frequency for hazardous occupancies.

Due to existing workload and current mandatory inspection schedule, the WFPS Fire Prevention Branch would not be able to complete any additional inspections without additional resources. One additional Fire Prevention Officer FTE, to be effective approximately July 1, 2014, will be required to provide the necessary human resource to accomplish the required training and inspection services. The estimated 2014 cost for this position including salary and benefits is $66,470.

Costs for the additional FTE will be recovered through the establishment of a $150.00/hr fee for high hazard inspections. Revenue generated from the inspection fee is estimated to be $157,500.00 annually (300 inspections at an average of 3.5 hrs each at $150.00/hr). The estimated 2014 revenue to be generated from these inspections is $78,750.00.

Some of the high hazard occupancies may not be in compliance with the building code, fire code or other regulations, which may affect their ability to continue with current business processes. To offset this affect, WFPS will provide notice to all high hazard occupancies that an inspection process has been established and inspection criteria will be outlined.

The objective of this process is to provide continued safety for the community, for industry, and for the environment, and to provide for a collaborative approach that will increase code and safety compliance and to ensure, as much as possible, the continued financial and economic viability of the industry.

HISTORY

On October 1, 2012 a significant fire engulfed the Speedway International plant at 40 Nicolas Street. The fire completely destroyed the facility and resulted in the evacuation of homes and businesses encompassing an 800 metre radius of the incident. The fire required significant resources of the City of Winnipeg, including: Winnipeg Fire Paramedic Service (WFPS), Winnipeg Police Service (WPS), Public Works, Transit, and Corporate Communications. Additional Provincial resources requested were; The Office of the Fire Commissioner (OFC) Investigators, Department of the Environment, and Federal Military resource 17 Wing crash foam unit.

The matter is currently subject to prosecution initiated by the City of Winnipeg.

The fire and subsequent investigation resulted in a review of the entire mission industrial area with recommendations submitted in a report to SPC on Property and Development on October 8, 2013.

The Winnipeg Fire Paramedic Service was requested to provide "the current enforcement practices and procedures of city by-laws, provincial acts and federal railway regulations related to hazardous materials", to the November 4, 2013 SPC on Protection and Community Services. Due to the depth and complexity of the information requested WFPS requested an extension. The November 4, 2013 meeting of the Standing Policy Committee on Protection and Community Services was rescheduled to November 7, 2013. At the November 7, 2013 meeting (Minute No. 7) the SPC on Protection and Community Services granted an extension of time of up to 60 days for the Winnipeg Public Service to report back on the matter. In order for final review of the report to take place at Agenda Management a further extension was requested. At the January 13, 2014 meeting (Minute No. 33) the SPC on Protection and Community Services granted a further extension of time of 30 days for the Winnipeg Public Service to report back on the current enforcement practices and procedures of city by-laws, provincial acts and federal railway regulations related to hazardous materials. At the February 10, 2014 meeting (Minute No. 44) the SPC on Protection and Community Services granted a further extension of time of 30 days for the Winnipeg Public Service to report back on the matter.

Discussion

Under the Manitoba Fire Code an ***Industrial occupancy*** means the *occupancy* or the use of a *building*, or part thereof, for the assembling, fabricating, manufacturing, processing, repairing or the storing of goods and materials. Industrial occupancies are sub-categorized as FI (high hazard)[1], F2 (medium hazard)[2], and F3 (low hazard)[3].

The difference between a medium-hazard industrial (Group F, Division 2) occupancy and a low-hazard industrial (Group F, Division 3) occupancy is the limits on the combustible content. A low-hazard industrial occupancy has a maximum limit on the combustible contents (e.g. not more than 50kg per sq. meter or 1200 MJ per sq. meter) in the building, whereas a medium-hazard industrial has no upper limit. However, for a high-hazard (F1) occupancy, it is not primarily the combustible content (concentration/amount) that governs, but the nature of those combustible contents in the building. That

[1] ***High-hazard industrial occupancy*** **(Group F, Division 1)** means an *industrial occupancy* containing sufficient quantities of highly *combustible* and flammable or explosive materials which, because of their inherent characteristics, constitute a special fire hazard.

[2] ***Medium-hazard industrial occupancy*** **(Group F, Division 2)** means an *industrial occupancy* in which the *combustible* content is more than 50 kg/m^2 or 1200 MJ/m^2 of *floor area* and not classified as a *high-hazard industrial occupancy*.

[3] ***Low-hazard industrial occupancy*** **(Group F, Division 3)** means an *industrial occupancy* in which the *combustible* content is not more than 50 kg/m^2 or 1200 MJ/m^2 of *floor area*.

is, highly combustible and flammable or explosive materials will determine if an occupancy is deemed to be high-hazard.

There are numerous Legislation, Acts, Regulations, Policies, Standards and Guidelines in effect which govern and control hazardous materials within Canada. They are far too lengthy and detailed for the intent of this report, and many require in depth technical expertise to understand and apply. The key intent of this report is to recognize that there are several processes in place to ensure the proper use and handling of hazardous materials, however, the question resides with enforcement level and jurisdictional authority of the many governmental agencies which have a key role to play.

Current Enforcement Practices

Applications for building permits are submitted by the owner to Planning, Property & Development (PP&D). PP&D provides a review of the application and associated architectural/engineered drawings to ensure that the construction intended under the scope of the permits are in compliance with the Manitoba Building Code. Once the plans have been approved by PP&D a building permit will be granted to the owner to begin the construction process. During the construction process PP&D inspectors will do site inspections along with the owner and architect/engineer to help ensure that the work is meeting the standards set out in the relevant codes.

The WFPS is responsible to inspect buildings in the City of Winnipeg based on the Manitoba Fire Code and the Manitoba Building Code, both of which are mutually supportive documents. The OFC also currently mandates specific inspections that must occur at frequencies specified by the mandate. Refer to Appendix C. All other occupancies not included in the mandated list are inspected for violations based on three criteria, which is fundamentally a complaint driven process, as follows:

1. A complaint is lodged with the WFPS Fire Prevention Branch. Upon receipt of the complaint WFPS inspectors will inspect the property as soon as is practicable.
2. The owner may request an inspection based on their own concerns.
3. Fire crews will file a report based on observations made during a response to a property.

All other occupancies are inspected at the discretion of the Fire & Paramedic Chief, who acts as the local assistant to the OFC.

The inspection of high hazard occupancies followed the same complaint driven process as for all occupancies that are not required under the mandated inspection schedule established by the OFC. It is clear that from the lessons learned from the fire of October 1, 2012 that a proactive and effective inspection process is required. The WFPS has been working with the OFC to develop an inspection process and frequency for high hazard occupancies listed in the F1 category, and expects receipt of a schedule for mandated high hazard inspections to be established. Under the Act, the Fire Paramedic Chief listed as the local assistant to the Fire Commissioner has the authority to inspect all properties within the assigned jurisdiction. This report recommends a scheduling and strategy for inspections of high, medium and low hazard occupancies be established through joint collaboration between WFPS and PP&D.
The Building Code covers the fire safety and fire protection features that are required to be incorporated in a building at the time of its original construction. Subsequent changes to building code standards after occupancy is established typically do not apply retroactively to the building or its occupancy, but would apply if the building is undergoing alteration or change of use, or being demolished. Changes to the Fire Code standards may apply retroactively.

The Fire Code only provides for enforcement related to:

- the on-going maintenance and use of the fire safety and fire protection features incorporated in buildings
- the conduct of activities that might cause fire hazards in and around buildings
- limitations on hazardous contents in and around buildings
- the establishment of fire safety plans
- fire safety at construction and demolition sites

The Building Code requirements generally apply based on the code in effect at the time of building permit application, enforced through the original permit approvals and subsequent occupancy inspections and permits. On-going or subsequent fire inspections help ensure that the safety features required at the time of occupancy permit approval are maintained, and that ongoing activities do not introduce new hazards that were not part of the original use or occupancy.

The Fire Code requirements for the establishment of fire safety plans offers a significant opportunity for improved contributions by WFPS for city regulatory oversight and also with regard to basic life safety for emergency responders who attend buildings with unknown hazards and unapproved occupancies and uses. These plans are required under the Manitoba Fire Code and must be prepared in cooperation with the WFPS and other applicable regulatory authorities (Province, PP&D, Transport Canada). Building owners will find it very difficult to secure a fire safety plan for a structure or application that is in violation of the occupancy permit or the various codes. When fire safety plans are created/reviewed, or at the time of inspection, it may become clear to the owner where any deficiencies may lie.

The bulk of inspection requirements could be enhanced by the involvement of the fire operations crews. Inspections of this type will infuse greater knowledge for the City as a whole and permit a readily identifiable and enforceable process. Uninspected buildings of a high hazard type can create unnecessary risk due to a lack of current or accurate information related to occupancy type/use, construction type, floor plan layouts, contact information, hazardous materials on site, life safety systems and fire protection systems. WFPS is currently investigating the possibility of improvement in this area.

Procedures of City By-Laws

The initial building and subsequent occupancy permit process is the foundation of the system that secures initial compliance to relevant codes. A new occupancy permit is required at the time of initial construction, extensive renovations, change of use, or changes in hazardous materials storage. An occupy-only permit would likely be required in the case of a change of tenant or new owner occupancy. As changes may occur without the knowledge of the City, it is incumbent on the owner to inform the City of these changes through the building and occupancy permit process. If the changes are not reported through the permitting process by the owner, it can become extremely difficult for the City to become aware of the changes that have been made subsequent to establishing the occupancy permit.

The current occupancy information maintained by PP&D does not facilitate an easy (on-site) means for a fire inspector to check whether a building or business has a valid occupancy permit, if the occupancy permit accurately reflects the type of use of the property, the type of fire safety and fire protection systems that are in place or which are required given the nature of the occupancy. There exists a Provincial database that has relevant information such as environmental licensing. Properties and businesses can frequently change owners, business type within a property may come and go, storage types and quantities change, extensive renovations are often completed, and/or a complete change of use occurs without ever having an engineering review or confirmation that the building codes are complied with.

Provincial Acts

The main undergirding documents that provide for inspection and enforcement are the Manitoba Building Code and the Manitoba Fire Code, which are produced by the Federal Government and adopted by the Provinces. Several other Federal and Provincial Legislations, Acts, Regulations, Guidelines, Standards, etc., provide the necessary authority to ensure the proper construction, installation, storage, transportation, usage, recycling, disposal, etc., of hazardous commodities. The Manitoba Municipalities Act, the Fires Prevention and Emergency Response Act, and by-laws such as The City of Winnipeg Fire Prevention By-law also contribute to the necessary enforcement of the various policies.

Federal Railway Safety Regulations

The governance of railways in Canada is complex and has many tiers: acts of parliament, regulations, rules, and directives are only some of the instruments that impact this industry. The bulk of regulation falls under Transport Canada who has the responsibility and authority to propose and enforce laws and regulations to ensure safe, secure, efficient and clean transportation. Transport Canada, based on risks, develops safety standards and regulations, provides oversight and gives expert advice (through the Canadian Transport Emergency Centre — CANUTEC) on dangerous goods accidents to promote public safety in the transportation of dangerous goods by all modes of transport in Canada.

Transportation of Dangerous Goods Act and Regulations promote public safety in the transportation of dangerous goods. Although there are several Acts and Regulations that govern the transportation of dangerous goods, in terms of Federal Railway Regulations, the fundamental Act in place is the "Railway Safety Act".

The objectives of this Act are to:

a) promote and provide for the safety and security of the public and personnel, and the protection of property and the environment, in railway operations;

b) encourage the collaboration and participation of interested parties in improving railway safety and security;

c) recognize the responsibility of companies to demonstrate, by using safety management systems and other means at their disposal, that they continuously manage risks related to safety matters; and

d) facilitate a modern, flexible and efficient regulatory scheme that will ensure the continuing enhancement of railway safety and security.

Other regulations apply, specifically Part 10 of the Transportation of Dangerous Goods (TDG) Regulations referring to transportation of dangerous goods into Canada or reshipping within Canada. Transport Canada ensures that strong federal railway safety regulations are in place to ensure the safety and protection of the public.

Transport Canada does not advise railway operators in advance of inspections for equipment and operations, except for the inspections of tracks. Transport Canada's oversight role includes monitoring railway companies for compliance with rules, regulations and standards, as well as the overall safety of railway operations through audits, inspections, and investigations. Rail companies are inspected regularly as part of Transport Canada's risk-based inspection program. If regulations are not followed, the department does not hesitate to take enforcement action.

Building upon recent safety advisories from the Transportation Safety Board and to further enhance rail safety operations, on July 23, 2013, Transport Canada announced an emergency directive pursuant to section 33 of the Railway Safety Act requiring all railway operators to adhere to further safety regulations.

Federal Railway Safety Regulations work concomitantly with Transport Canada Regulations along with the Transportation of Dangerous Goods Act and Regulations. These may need to be considered more carefully if industry is using rail cars as semi-permanent storage facilities. Occupancies that have been approved for use under permit despite no adequate permanent storage facilities required for the occupancy type of use may have the potential to contribute to violations of the Federal Railway Safety Regulations.

Attached as Appendix D is a listing of occupancies that have been issued high hazard (F1) permits within the City of Winnipeg.

FINANCIAL IMPACT

Less: Existing Budget Amounts	-	-	-	-	-
Net Budget Adjustment Required	$ (12,280)	$ (21,224)	$ (15,894)	$ (13,615)	$ (10,173)

Additional Comments:

1. The estimated salaries & benefits for the additional Fire Prevention Officer FTE will be funded through increased revenue generated from the inspection fee. The rates include negotiated increases as well as 33% benefits. The costs are estimated to be effective July 1st, 2014; therefore, only a half year of costs is shown for 2014.
2. Revenue generated from the inspection fee is estimated to be $157,500.00 annually (300 inspections at an average of 3.5 hrs each at $150.00/hr). The program will be commencing July 1, 2014, therefore, only a half year revenue is shown for 2014.

City of Winnipeg
Fire Paramedic Service
Fire Inspection Fees and Service Rates

(Effective January 1, 2014)

Inspection Fees (GST applicable)	Unit(s)*	Rate
Residential care facility	Each	$170
Elderly person's housing	Per Hour	$98
Child care centre	Per Hour	$98
Personal care home	Per Hour	$98
Hospital	Per Hour	$98
Premises licensed by the Manitoba Liquor Control Commission	Per Hour	$98
Public or private School	Per Hour	$98
University or college	Per Hour	$98
Arena	Per Hour	$98
Curling rink	Per Hour	$98
Community club	Per Hour	$98
Hotel or motel	Per Hour	$98
Restaurant (located in residential building)	Per Hour	$98
Second and subsequent re-inspection	Each	$81
Third and subsequent re-inspection to check on compliance when fire crews have conducted initial inspection	Each	$109
Post-Fire Inspection	Per Hour	$98
Inspections of a building when a response to a complaint reveals the need for a full inspection	Per Hour	$98
After normal business hours inspection	Per Hour	$98
Requested inspection	Per Hour	$98
Fireworks site inspection - less than 3 hours inspection time	Each	$217
Fireworks site inspection - for each additional hour or part thereof	Per Hour	$98
Fireworks site inspection outside of regular office hours	Per Hour	$98

Appendix B

Permit Fees (GST not applicable)	Unit(s)	Rate
Fireworks display permit - pryotechnic special effects	Each	$163
Fireworks display permit - high hazard	Each	$163
Fireworks display permit - low hazard	Each	No Charge
Small quantity fireworks distribution storage permit (annual fee)	Each	$26
Fireworks distribution permit (annual fee)	Each	$109
Dangerous quantities fireworks storage permit (annual fee)	Each	$217
Residential back yard fire pit	Each	No Charge
Open-air fire permit	Each	$81
Permit cancellation fee	Each	$26

Miscellaneous Fees	Unit(s)	Rate
Second and subsequent review of Fire Safety Plan	Each	$109
Emergency installation of smoke alarm	Each	$109
Annual license fee for licensed service person	Each	$21
Fine for unlicensed service person (discounted to $300.00 for early payment)	Each	$540
Public education services provided outside regular office hours	Per Hour	$86

Per Hour Inspection Charge: A $98.00 per hour charge will apply to each full or part hour and will include inspection time for the initial and first re-inspection, report writing time and travel time.

Appendix C

Inspections Mandated by Province of Manitoba

Frequency: Annually

- Child Care Centres
- Residential Care Centres
- Elderly Persons Housing
- Personal Care Homes
- Hospitals

Frequency: Every 3 Years

- MLCC Licensed Premises
- Private and Public Schools
- Universities and Colleges
- Arenas, Curling Rinks and Community Clubs
- Hotels and Motels
- Restaurants in Residential Buildings
