

Winnipeg Climate Action Plan 2023 Annual Report

May 31, 2024

Global Mean Temperature Difference

Source: World Meteorological Organization

OurWinnipeg 2045

- Adopted by Council in May 2022
- Climate Action Targets:
 - 20% GHG reduction by 2030, relative to 2011
 - **Net Zero emissions by 2050**

Community Energy Investment Roadmap (CEIR)

- Adopted by Council in July 2022
- City and community-wide systems level actions and investments to achieve climate action targets (Net Zero by 2050 from OurWinnipeg 2045)
- Inform development of strategic City policies, infrastructure plans and investments

A Whole City Approach

- Council's Strategic Priorities Action Plan
 - CEIR identified as a key performance indicator
- Sustainable Procurement Action Plan
 - First full year of implementation
- Zoning By-law Review

Green Buildings

- CEIR application to City projects, update to Green Building Policy in progress
- Energy efficient upgrades and financial support through Efficiency Manitoba for existing City buildings

Zero-Emissions Transportation

- Transition to Zero Emissions Bus Program
- Winnipeg Fleet Management Agency studying City's infrastructure compatibility for EVs
- Permanent conversion of nine bicycle routes to neighbourhood greenways, additional five bicycle routes designated as seasonal routes

Local Renewable Energy

- Location types solar power generation and futureproofing referred to Green Building Policy update process
- Contract award for preliminary design and Class 3 cost estimate for grid-tied microgrid as part of Zero-Emissions Bus Program

Sustainable Waste Management

- Comprehensive Integrated Waste Management Strategy Review
 - First phase of engagement (waste audits and stakeholder meetings, interviews)
- Biosolids Program

Resilience

- Winnipeg Clean Air Spaces - Phase One facility assessment tool
- Winnipeg Comprehensive Urban Forestry Strategy
- Master Greenspace and Natural Corridors Plan - project scoping
- Poverty Reduction Strategy – second phase approval

2023 Corporate GHG Inventory

- Follows Partners for Climate Protection (PCP) protocol
- Energy use and emissions from operations (Buildings, Vehicle Fleet, Water & Wastewater, Streetlights and Waste)

Climate Tools

- Data Collection Enhancement for GHG Inventory Collection
- Climate Lens
- Climate Impact Assessment
- Climate and Carbon Budgets

2023 Corporate GHG Inventory

- 316,626 tonnes of CO₂e
 - 3.1% decrease from 2022
- Decreases in Waste, Water & Wastewater, Vehicle Fleet
- Increase in Buildings

2023 Corporate GHG Inventory

- 2,735,610 GJ energy
 - 2.8% decrease from 2022
- Decreases in Water & Wastewater, Vehicle Fleet
- Increase in Buildings

Largest Areas of Emissions Change

- Reduction in total waste landfilled
- Reduction in Wastewater treated volumes
- Flexible Workplace Program
- Transit Use

2023 Corporate GHG Inventory Improvements

- Corporate Waste aligned with PCP protocol
- Measured tonnage, not estimated volume
- Additional waste streams: all waste going to City owned and operated landfills
- Change was applied to past inventories to facilitate comparison
