RE: Opt-Out Program for the Advanced Metering System

I am in support of an opt-out program for the Advanced Metering System but I am opposed to the opt-out program being limited to only those who provide proof of need for medical exemption.

This provision is not sufficient because:
1) many doctors in Manitoba are not well informed about the health effects of radiofrequency radiation;
2) symptoms may not present until after the meter is installed;
3) many of the adverse health effects caused by radiofrequency radiation become evident only after significant harm has been done;
4) forcing the use of radiation emitting technology interferes with the right of citizens to protect and make choices about their health.

Health Canada has a track record of approving products that are not safe or effective. For example, Thalidomide caused deformities in babies; Johnson & Johnson baby powder caused ovarian cancer; Vioxx increased the risk for heart attack and stroke; and the covid 19 "vaccine" did not produce immunity, prevent the spread of infection, hospitalizations or death as they promised. It caused blood clots, myocarditis and other adverse effects. These are only a few examples of government approval failures. The consequences have been devastating and this is why the City of Winnipeg must not force radiation emitting smart meter technology on residents who don't want it.

Can you guarantee that exposure to the radiation from smart meters will not cause or contribute to any adverse health effects for children or adults?

Can you guarantee the cumulative effects of radiation from smart meters along with other sources of radiation in the environment will not cause any adverse health effects for children or adults?

Can you guarantee the radiation from smart meters will not exacerbate an existing health problem?

Are you prepared to personnally accept the liability for the harm that results from your decision to implement an advanced metering system without making the provision to opt-out available to all residents who do not want it?

I urge you to make opting-out a provision for every resident without limitations.

Sincerely,

Charlene Currie BN, MBA
