To the Members of City Council
City of Winnipeg

Re: Winnipeg Smart Meter Program (Advanced Metering System)

EPC has received written submissions and presentations (in-person and via zoom) from highly credentialled scientists, researchers and others to inform that:

1) There are no long-term studies to make a claim that smart meters are safe.

2) Scientific data "proves beyond any doubt" that Health Canada's safety limits are inadequate to protect people's health from the effects of electromagnetic radiation.

3) Animal studies sponsored by the World Health Organization have shown a link between radiofrequency fields and cancer.

4) Human suffering from electromagnetic sensitivities is real.

We know throughout history that the Canadian government has approved products that were not safe or effective. The following lists a few of them:

* Thalidomide given to pregnant women caused deformities in babies,
* Asbestos,
* Baby powder was found to be linked to ovarian cancer,
* Vioxx was linked to heart attacks and stroke,
* Covid-19 vaccine did not stop the spread of infection, hospitalization or death from the virus as promised even after people were coerced into taking it. But it did cause blood clots, myocarditis and other serious adverse events.

The consequences of these so called "safe" products have devastated the lives of many.

Council members cannot guarantee radiation from smart meters will not cause harmful health effects to residents of Winnipeg. Nor can they guarantee the cumulative effects of radiation from smart meters along with the other sources of radiation in the environment will not cause harm.

I strongly urge you to make opting out of the smart meter system available to the citizens of Winnipeg who don't it.

Sincerely,

Charlene Currie BN, MBA
