City hall would like us to believe that they make decisions based on evidence.

We see bold statements in the agenda. They say this change will reduce the chances and or severity of collisions.

Please provide the evidence that was gathered for this.

Situation 1: everyone on foot waits until they are sure no vehicle presents a danger to them. This applies to those crossing busy roads at crosswalks. For decades, this messaging kept us safe.

Situation 2: LPI trains those on foot to ignore vehicle traffic, and to cross whenever they want to, without looking to one side. Recall that big Euro cities write LOOK RIGHT on their roads. Those cities know safety. You are abandoning this critical warning. At LPI intersections, drivers fully conversant in LPI wait for those on foot. Other drivers can still present a danger to those on foot who do not confirm that it is safe to cross. Those on foot, trained by LPI, will be more likely to step in front of cars at crosswalks and non-LPI intersections, which cannot stop in time. Before installing more LPIs, safety requires that this likelihood be measured. A program of pedestrian education will be needed to mitigate the danger that LPI creates.

If you do not have the data, will it be provided before LPI spreads danger into our suburbs?

Public engagement (optional)

I consent to being contacted to participate in potential public engagement related to this matter.

Yes
