Much of the city's critical infrastructure was made with reinforced concrete. Each piece of this is a disaster in waiting. Unless the steel in these pieces was made invulnerable to rust moisture will creep in and cause rust. The rust make the steel swell. This will burst the concrete leading to failure.
As a young engineer, I once thought of concrete as permanent. I know better now.
I see no special note made in the RISK part of this report to mitigate the cost in time and $.
I see typos that do not belong in any such report.
I believe that the city should plan for the failure of any of its reinforced concrete, when working with such old pipes and structures.

Public engagement (optional)

I consent to being contacted to participate in potential public engagement related to this matter.
Yes
