REASON FOR THE REPORT

In accordance with Clause 27(1)(b) of the Development Procedures By-law 104/2020, Council approval is required for the City to enter into Servicing Agreements that are a condition of approval under a short-form subdivision application (DASSF).

IMPLICATIONS OF THE RECOMMENDATIONS

Concurrence with this recommendation will enable servicing conditions to be applied to this application via a Servicing Agreement.

HISTORY/DISCUSSION

An application was received from Barnes & Duncan on behalf of the owner for a proposed plan of subdivision as outlined in Schedule "A" in order to accommodate future development. The consolidation of the land is intended to facilitate the construction of a proposed industrial building.

The Public Works Department and Water and Waste Department have identified various payments and/or improvements that are required to accommodate the proposed development.

It is therefore recommended that the Developer enter into a Servicing Agreement with the City to fulfill the conditions outlined in the attached Schedule "B", the report of the Administrative Coordinating Group.

REPORT OF THE ADMINISTRATIVE COORDINATING GROUP

RE: PROPOSED SUBDIVSION OF LAND LOCATED AT 999, 1001 AND 1005 MISSION ST

It is recommended that approval of DASSF 505/2026, if granted, be subject to the applicant entering into a Servicing Agreement containing the following conditions:

Section I – General Comments

a) The Water and Waste Department (WWD) has advised that there is adequate water servicing capacity to support the proposed land use. Additional fire hydrants will be required to ensure all proposed buildings have adequate fire protection. In the event that the development plans change, WWD will need to review the revised proposal.

b) The subject land is located in a combined sewer district. In accordance with Clause 8 of Environment Act Licence 3042, any development on the land cannot result in an increase in flow into the combined sewer. Typically, increases in wastewater discharge may be offset by a reduction in land drainage discharge from the property.

At the site servicing design stage, the discharge from the proposed future development into the combined sewer must not exceed the allowable discharge rate:

i) The allowable discharge rate shall be the sum of the existing peak wastewater and the peak land drainage discharged.

ii) The peak land drainage discharged from the site must be based on a c-value of 0.10, with a 5-year rainfall event applied.

iii) The existing and proposed peak wastewater discharge must be estimated using the Wastewater Flow Estimation Guidelines published on the City of Winnipeg website (http://winnipeg.ca/waterandwaste/dept/wastewaterFlow.stm), unless otherwise approved.
